

DAF Wastewater Treatment System

Case Study Details

Pinty's Delicious Foods, required a larger treatment system to handle the increased production at their facility. H2flow provided a Dissolved Air Flotation treatment system. The average flowrates are 34 m³/hr with a peak of 68m³/hr.

The system has recently started operation with immediate highly efficient removal performance with effluent turbidity of 50 – 100NTU.

Start-Up: 2015
